For community college
career services

The problem

One advisor. **More than 200 students a semester.**

A student brings in a résumé and a job they want. The advisor reads both, works out what's missing, and writes a plan. It takes about an hour, it's the best work they do — and there is only ever time for a handful of students.

What it does

Drop in a résumé. Drop in the job posting. Get back:

What's missing

...and the exact line of the posting that proves it

What to build

Real projects, ranked by how fast they close the gap

A six-week plan

About six hours a week, laid out week by week

What changes

TODAY	WITH THIS
 About an hour per student	Under a minute
 A handful get the deep version	Every student does
 Quality varies with the day	Same checks, every time
 The hour goes on analysis	The hour goes on advising

Why you can trust it

Every claim is quoted from the real posting.
Every project comes from a catalog **your team approved**. Nothing reaches an advisor until it passes a fixed checklist.

**If it can't prove it,
it doesn't print it.**

Who needs this

Community college career services. Two-person teams carrying hundreds of students — the advisors who already know exactly what to say, and just can't say it two hundred times.

Why it matters

A student's next job shouldn't depend on whether there was time in the calendar.

Ready to see it?

Ten students. One afternoon. Bring your own résumés.

Figures describe a pilot design, not measured results. "More than 200 students a semester" and "about an hour per student" describe current practice as reported by advisors. "Under a minute" is an estimate from the system design and has not yet been measured in service. · Colaberry · Advisor Gap Report
